

RETROFIT SOLUTION FOR EXISTING DRAWING LINE

EJP is not only your partner for new production lines for the manufacture of bars, tubes, and profiles, but also supports you in bringing your existing equipment to a new level in terms of productivity and safety.

Against this backdrop, a North American bright steel producer has once again chosen EJP. The project involves expanding an existing combined drawing line for a dimensional range of \varnothing 10–28 mm with several additional components. These include a double pay-off reel without foundation, a manipulator/robot for opening the wire end, as well as a horizontal and vertical pre-straightener and a shot blasting machine with three blast wheels. The system is complemented by the corresponding hydraulics and the necessary electrical control system.

All machines are fully assembled, piped, wired, and tested before being loaded and shipped.

If you are interested in visiting this installation, as well as another complete peeling line for a dimensional range of \varnothing 10–60 mm, please feel free to contact us.

 Save the date:

From 21 - 24 September 2026
EJP is at wire China.

From 30 November 2026 - 02
December 2026 EJP is at wire
India.
